

Asyra Foundation

Energetic Language - We believe every person is endowed with innate intelligence. Some may prefer to use the terminology Spirit, some may prefer to say Soul or Divine Intelligence, while others may simply call it Energy. We believe this innate Intelligence came before the physical body and will continue to exist when the body stops functioning. We believe when an individual is referring to "me" or "I", they are referring to this Intelligence that makes them unique and is not related to an individual's IQ. This Intelligence can communicate through a multiplicity of languages.

We believe we interact with everything via an exchange process involving this energetic language. From the simplest organism to the most complex; from the food we eat to the words we speak, from the clothing we wear to the chemicals in our environment, everything carries with it the information that makes it unique as well as how it relates to the whole. This information is often referred to as a frequency or signature pattern. We believe it can be as simple as a single note or as complicated as a symphony; carrying with it a tiny bit of information, or complex and large amounts of data.

Testing - When a test is run on an individual, we are communicating with their Intelligence by sending signatures (informational patterns) that are output through the test plate and the response is measured through the electrodes. We are not looking at medical or chemical quantitative values. Each test gives a unique qualitative picture for the individual, which comes from the responses gathered during that specific exchange of information. For example, does their Intelligence have the information it needs, or is there a disruption in the data flow, either in whole or in part, that is creating issues? We believe one way our Intelligence can display these disturbances is through the manifestation and experience of discomfort.

We believe when the individual has the needed information, and all parts of the energy flow to and in itself are reestablished, it then has the ability to regain homeostasis, or fix itself. Crossovers with the language of medicine are inevitable at times, but the essential difference is our recognition that diseases do not have their own identity, and diagnostic terms are just a convenient grouping of symptom experiences.

Restoration - The highly specific information your Intelligence selects from the testing procedure is imprinted or copied into a medium using the test plate and acts like a software program for the innate Intelligence. We believe when the correct information and communication is reestablished the manifestation of dis-ease can be reduced or eliminated. This effect of new communication may be termed by some as treatment of disease, when in fact it is simply a new pattern established through corrected communication, with new information uploaded and applied.

Whether or not this information is effective depends on the desire of the unique individual and the energy needed to change course. In using this technology and its imprinted software program for our Intelligence, we cannot override the agency of the individual. This explains why an individual using corrected communication does not have undesired side-effects. While we have learned much about this method of communication with the Intelligence, we recognize it is an ever-evolving process with much more to be learned.

Asyra - Scientifically, many years were spent discovering the best way to send this energetic information and measure how our intelligence communicates with, and responds to, the information being sent. The hardware functions are described using terminology familiar to electrical engineers; however, the software language or signatures we output are unique to the Asyra. The sophistication of the response measurements and the scope of the Asyra database are some of the key features that set the system apart and account for the ground-breaking results being experienced.

Stressed Weakened Symptomatic / Causal Balanced Retest 2 of 11

Re-establishing balance to the energetic pathways (that run through specific organs, glands, and tissues) may hold the key to restoring and maintaining optimum health. This approach is not looking for any particular disease state, and therefore no claim of diagnosis can be made.

opposition is better termed complementary in nature rather than antagonistic. For an analogy, one may think of the sympathetic division as the accelerator and the parasympathetic division as the brake. The sympathetic division typically functions in actions requiring quick responses. The parasympathetic division functions with actions that do not require immediate reaction. Consider sympathetic as "Fight or Flight" and parasympathetic as "rest and digest".

Heavy Metal Signatures (68)

Francium 4000C 12 Drops 4 Weeks
 A highly radioactive element.

L1-Borrelia Signatures (60)

Borrelia Novyi 10MM 12 Drops 4 Weeks
 Lyme is an inflammatory disease characterized at first by a rash, headache, fever, and chills, and later by possible arthritis and neurological and cardiac disorders, caused by type of bacterium called Borrelia burgdorferi. This and other infections (called coinfections when transmitted at the same time) can be transmitted by mosquitos, pets, ticks or other biting insects. It is very hard to medically diagnose because of its ability to mutate in the body and it can become resistant to antibodies and in some cases be hard for the immune system to eliminate. Energetic imprints, diet modification, homeopathics, herbal antibacterial remedies, the rife machine, and other detox methods have shown to be beneficial.

Constitutional Signatures (57)

Sarsaparilla 7LM 12 Drops 4 Weeks
 Refer to Homeopathic Materia Medica for symptom picture.

Search: "pancreas" (57)

Enviroprotect 170CM

Description and Uses: For a more aggressive preventative approach following a treatment program. Also useful in allergies, to assist in the body's removal of environmental irritants, including smog and other inhalants, from the system. An important remedy for long-term use in urban areas. To remove and prevent re-accumulation of environmental toxins.

Dosage:

Therapeutic: 10 drops two to three times daily

Preventative: 20 drops once daily in the morning, 20 drops in the evening before sleep

Helper Remedies: MAINTENANCE (A-10)

Acupuncture Meridians: stomach, lung, large intestine, liver, kidney, and pancreas.

Symptom Profile: Nausea, Fatigue, Overall weakness, Minor infections, Constipation, Belching, Stress and tension, Dizziness, Allergies, Stress of urban living.

Energique (57)

Drainage-Tone (EX) 32K 12 Drops 4 Weeks

2 oz. (59.1 mL) Description: Drainage-Tone® is a homeopathic combination formula for a broad range of symptoms related to congestion of the body's drainage pathways. In a healthy state, the drainage pathways are open and operative allowing waste products, both endogenous and exogenous, to be excreted. Drainage pathways are present in every system, organ, and cell in the body.

For symptoms such as swollen glands, sinus congestion, head congestion, mucous secretions, and skin eruptions.†

Active Ingredients: (per drop) Calc iod 12X, 30X; Capsicum 6X; Coenzyme A 8X; Echinacea 4X; Equisetum arv 6X; Hydrastis 5X; Naidum 8X; Nitricum ac 12X; Oleum morrhuae 15X; Petroselinum 4X; Phytolacca 4X; Scrophularia nodosa 4X, 6X, 12X; Silicea 12X; Sinapis alb 4X; Thuja occ 4X.
 Inactive ingredients: Ethyl Alcohol, Glycerin, Purified Water.

Recommended use: Take 30 drops orally twice daily, or as directed by your healthcare professional. Shake well before use.

†Claims based on traditional homeopathic practice, not accepted medical evidence. Not FDA evaluated.

Warnings: In case of overdose, get medical help or contact a Poison Control Center right away. If pregnant or breast feeding, ask a health professional before use. Keep out of reach of children.

Musculoskeletal Filter (62)

Somatrophin hGH 130K 12 Drops 4 Weeks

- Restore muscle mass
- Thicken skin
- Increase hair growth
- Increase sexual and stamina
- Increase sexual potency and fertility
- Restore size of internal organs
- Sharpen vision
- Improve mental cognition
- Uplift mood
- Deepen sleep
- Boost cardiac output
- Boost immune response

Polarity Signatures (65)

Polarity Plus 200C 12 Drops 4 Weeks

This remedy balances the electromagnetic systems of the body. Polarity relates to the direction and rate of spin of the electrons as they orbit the nucleus. If the orbital pattern or the spin of the electrons is incorrect, the cells can't process information correctly. If we compared the body to a computer, this would be like trying to process data for a Macintosh computer using IBM software; many systems won't operate effectively and the data that is there, the body doesn't know how to handle it. This remedy resets and restores proper balance to the energetic/electromagnetic patterns of the body.

Amino Acid Signatures (29)

Taurine (NA) 5K 12 Drops 4 Weeks

Taurine is an essential amino acid in pre-term and newborn infants of humans and many other species. Adults can synthesize their own taurine, yet are probably dependent in part on dietary taurine. Taurine is abundant in the brain, heart, breast, gallbladder and kidney and has important roles in health and disease in these organs.

Taurine has many diverse biological functions serving as a neurotransmitter in the brain, a stabilizer of cell membranes and a facilitator in the transport of ions such as sodium, potassium, calcium and magnesium. Taurine is highly concentrated in animal and fish protein, which are good sources of dietary taurine. It can be synthesized by the body from cysteine when vitamin B6 is present.

Deficiency of taurine occurs in premature infants and neonates fed formula milk, and in various disease states. An inborn error of taurine showed that low blood taurine results in early signs of depression, lethargy, fatigability, sleep disturbances, progressive weight loss and depth perception impairment. Later, a Parkinson's syndrome developed and progressed to coma and then death. Another inborn error of taurine metabolism has been described, with mitral valve prolapse associated with a rapidly progressive form of congestive cardiomyopathy. These patients have elevated urinary taurine levels and depressed levels of myocardial (heart muscle) taurine. There may be a subcategory

Stressed Weakened Symptomatic / Causal Balanced Retest 5 of 11

Re-establishing balance to the energetic pathways (that run through specific organs, glands, and tissues) may hold the key to restoring and maintaining optimum health. This approach is not looking for any particular disease state, and therefore no claim of diagnosis can be made.

of taurine-responsive mitral valve prolapse patients.

Taurine, after GABA, is the second most important inhibitory neurotransmitter in the brain, giving it anticonvulsant and antianxiety properties. It also lowers glutamic acid in the brain, and preliminary clinical trials suggest taurine may be useful in some forms of epilepsy. Taurine in the brain is usually associated with zinc or manganese. The amino acids alanine and glutamic acid, as well as pantothenic acid, inhibit taurine metabolism while vitamins A and B6, zinc and manganese help build taurine. Cysteine and B6 are the nutrients most directly involved in taurine synthesis. Taurine levels have been found to decrease significantly in many depressed patients.

Clinical uses: Taurine has many important metabolic roles. Supplements can stimulate prolactin and insulin release. The parathyroid gland makes a peptide hormone called glutataurine (glutamic acid-*taurine*), which further demonstrates taurine's role in endocrinology. Taurine increases bilirubin and cholesterol excretion in bile, critical to normal gallbladder function. It seems to inhibit the effect of morphine and potentiate the effects of opiate antagonists.

Low plasma taurine levels have been found in a variety of conditions, i.e., depression, hypertension, hypothyroidism, gout, institutionalized patients, infertility, obesity, kidney failure and others. Megataurine therapy has been proven to be useful in many patient groups, i.e., those with post myocardial infarction, congestive heart failure, elevated cholesterol or pre-ventricular arrhythmias. Dying heart muscle quickly becomes depleted of taurine. Taurine may prove to be useful in patients with epilepsy, gallstones, mitral valve prolapse, hypertension, hyperbilirubinemia, retinitis pigmentosa, photosensitivity and diabetes. Effective supplements range from 500 mg to 5 g orally. Therapy can be guided by plasma amino acid determination. Taurine is usually well absorbed, and taurine levels can increase to five times normal during therapy without ill effects.

Book: The Healing Nutrients Within, Eric R. Braverman, M.D. 2003

Electrolyte Signatures (81)

Sodium

28C

12 Drops

4 Weeks

An electrolyte is a substance that will dissociate into ions in solution and acquire the capacity to conduct electricity. Sodium is the major positive ion (cation) in fluid outside of cells. The chemical notation for sodium is Na⁺. When combined with chloride, the resulting substance is table salt. Excess sodium (such as from fast food hamburger and fries) is excreted in the urine. Sodium regulates the total amount of water in the body and the transmission of sodium into and out of individual cells also plays a role in critical body functions. Many processes in the body, especially in the brain, nervous system, and muscles, require electrical signals for communication. The movement of sodium is critical in generation of these electrical signals. Too much or too little sodium therefore can cause cells to malfunction.

Chromosomal Filter - Male (85)

Chromosome Y Sarcodes

13K

12 Drops

4 Weeks

The sex chromosomes X X are one of the 23 homologous pairs of chromosomes in a female. The X chromosome spans more than 153 million base pairs (the building material of DNA) and represents about 5% of the total DNA in women's cells, 2.5% in men's.

Each person normally has one pair of sex chromosomes in each cell. Females have two X chromosomes, while males have one X and one Y chromosome. Both males and females retain one of their mother's X chromosomes, and females retain their second X chromosome from their father. Since the father retains his X chromosome from his mother, a human female has one X chromosome from her paternal grandmother, and one X chromosome from her mother.

The Y chromosome is the sex-determining chromosome in most mammals, including humans. In mammals, it contains the gene SRY, which triggers testis development, thus determining sex. The human Y chromosome is composed of about 60 million base pairs.

In humans, the Y chromosome spans 58 million base pairs (the building blocks of DNA) and represents approximately 0.38% of the total DNA in a human cell. The human Y chromosome contains 86 genes, which code for only 23 distinct proteins. Traits that are inherited via the Y chromosome are called holandric traits.

The human Y chromosome is unable to recombine with the X chromosome, except for small pieces of pseudoautosomal regions at the telomeres (which comprise about 5% of the chromosome's length). These regions are relics of ancient homology between the X and Y chromosomes. The bulk of the Y chromosome which does not recombine is called the "NRY" or non-recombining region of the Y

Limbic System Resonance	<input type="checkbox"/>	
Liver Resonance	<input type="checkbox"/>	
Lungs Resonance	<input type="checkbox"/>	
Lymphatic System Resonance	<input type="checkbox"/>	
Maxillary Sinus Resonance	<input type="checkbox"/>	<input type="checkbox"/>

The sinuses are mucosa-lined airspaces within the bones of the face and skull; The maxillary sinus is located directly behind the cheek-bones on either side of the nose and opens to the nasal cavity. Through its copious mucous production, the sinus is an essential part of the immune defense/air filtration carried out by the nose. Nasal and sinal mucosae are ciliated and move mucus to the choanae and finally to the stomach. The thick upper layers of nasal mucus trap bacteria and small particles in tissue abundantly provided with immune cells, antibodies, and antibacterial proteins.

Symptoms may include: Chronic allergies, recurrent infections, tenderness or pressure below the eyes (around the cheeks), nasal congestion,

headaches, reduced ability to smell, productive cough (especially at night), post-nasal drip, toothache, malaise, or bad breath.

Emotional aspect: To breathe is to inspire, to take in new ideas. As such, imbalances in sinus energy may imply either a pushing away of what inspires us or nourishes us, or an overload of mental work without enough creative energy. As the extremity of the lungs, sinuses relate to our ability to breathe in chi. Sinuses also relate to the Stomach meridian.

Muscles Resonance

Pancreas Resonance

The pancreas is located just below the stomach on the lower-left quadrant of the abdomen. The pancreas is an endocrine-exocrine gland-organ that aids in the function of the digestive and endocrine systems. The exocrine function produces enzymes that help break down digestible foods; pancreatic juice contains three digestive enzymes: trypsin, amylase, and lipase that, along with intestinal enzymes, complete the digestion of proteins, carbohydrates, and fats, respectively. The endocrine function secretes hormones that regulate blood glucose levels; Insulin and Amylin lower blood sugar while Glucagon raises blood sugar.

Symptoms may include: Blood sugar imbalances, mid-abdominal pain, digestive disturbances (decreased enzyme production), frequently clammy or moist palms, unusually foul-smelling stools, greasy stools, excess thirst or urination, excess hunger, drowsiness, fatigue, decreased endurance, hormonal imbalances, or may become dehydrated.

Emotional aspect: Pancreas energy has much to do with maintaining balance in our lives - a balance of giving and receiving, of working and playing, of fear and love. The pancreas and stomach meridian associations with the earth element TCM, connect us to emotions related to compassion, motherly love, to personal transformation and transitions in life.

Parathyroid Gland Resonance

The parathyroid endocrine gland is located close to, and behind, the thyroid gland. Humans typically have four parathyroid glands. Each gland secretes parathyroid hormone, which regulates blood calcium and phosphate levels. The main function of the parathyroid glands is to maintain the body's calcium level within a very narrow range, so that the nervous and muscular systems can function properly. When serum calcium concentrations drop, increased hormone secretion releases calcium from bone into the bloodstream. An increase in parathyroid hormone secretion also increases excretion of phosphate in the urine, thereby lowering serum phosphate concentrations. In addition, the hormone regulates magnesium metabolism by increasing its excretion. Finally, there are reports that parathyroid hormone indirectly stimulates calcium uptake into the body across the intestine. Parathyroid hormone stimulates the production of the most active metabolite of vitamin D during vitamin D synthesis. This metabolite of vitamin D directly stimulates the intestinal absorption of calcium.

Symptoms may include: Bone disorders, nerve disorders, stiff-achy muscles, decreased enzyme function, abnormal heart rhythm, osteoporosis, malabsorption of vitamin-D, low levels of magnesium, calcium deficient, confusion, or depression.

Emotional aspect: In connection with thyroid energy, an imbalance in parathyroid response may relate to how we engage with life. Over-energy here may be associated with a fear of responsibility, or of avoiding responsibility by staying overly busy. A depleted energy response may suggest that the will to live is depressed or that the person is entering a state of emotional hibernation.

Peripheral Nervous System Resonance

Pineal Gland Resonance

Pituitary Gland Resonance

The Pituitary gland is a small oval endocrine gland that lies at the base of the brain. It is sometimes called the master gland of the body because all the other endocrine glands depend on its secretions for stimulation. The secretions control the other endocrine glands and influence: growth, metabolism, reproduction, vascular control, and maturation. Other secreted hormones influence body functions by stimulating target organs. Adrenocorticotrophic hormone (ACTH) controls the secretion of steroid hormones by the adrenal cortex, which affects glucose, protein, and fat metabolism. The pituitary controls the rate of thyroxine synthesis by the thyroid gland, which is the principal regulator of body metabolic rate. It also produces three separate gonadotropic hormones (follicle-stimulating hormone, luteinizing hormone, and luteotropic hormone) which control the growth and reproductive activity of the gonads.

Symptoms may include: Metabolic issues, hypothyroid, growth and maturation concerns, recent head trauma, alterations in immune function, or fluctuating hormonal imbalances.

Emotional aspect: The pituitary gland is sometimes called the "seat of the mind" and relates to reason and intellectual concepts as well as emotional thoughts such as poetry and music. Consider the balance of thought and emotion.

Reproductive Organs Resonance

Skeletal System Resonance

The skeleton is the internal framework of the human body and performs six major functions: support, movement, protection, production of blood cells, storage of minerals, and endocrine regulation. The skeleton supports the body and maintains its shape and helps to protect our many vital internal organs from being damaged. It is the site of hematopoiesis, the development of blood cells that takes place in the bone marrow. In children, hematopoiesis occurs primarily in the marrow of the long bones such as the femur and tibia. In adults, it occurs mainly in the pelvis, cranium, vertebrae, and sternum. The bone matrix can store calcium and is involved in calcium metabolism, and bone marrow can store iron in ferritin and is involved in iron metabolism. However, bones are not entirely made of calcium, but a mixture of chondroitin sulfate and hydroxyapatite, the latter making up 70% of a bone. Bone cells release a hormone called osteocalcin, which contributes to the regulation of blood sugar (glucose) and fat deposition. Osteocalcin increases both the insulin secretion and sensitivity, in addition to boosting the number of insulin-producing cells and reducing stores of fat.

Symptoms may include: Bone pain, lumps, brittleness, fractures, dislocation, osteoporosis. Bone problems could be associated with other

symptoms due to injury, including bleeding, bruising, body aches, numbness, muscle aches and pains, weakness, swollen or inflamed joints, reduced mobility.

Emotional aspect: The bones and skeleton represent the structure of your life and the Universe. The skeleton creates the supportive inner framework of the body, just as our deepest beliefs support and give meaning to every aspect of our lives. Just as the bones support our physical being and give life to the muscles, so our core beliefs give us constant inner strength and support. Bones may represent conflict within the deepest part of our being. According to TCM, the health of our bones is governed by Kidney chi. Depression, including persistent sadness, feelings of worthlessness or excessive guilt, insomnia, difficulty concentrating or making decisions, and restlessness, is associated with bone problems. Helpful affirmations: I am well-structured and balanced. I am strong and sound.

Skin Resonance

Small Intestine Resonance

Sphenoid & Ethmoid Sinus Resonance

Spleen Resonance

Stomach Resonance

One of the principal organs of digestion located between the esophagus and the small intestine in the upper-left quadrant of the abdomen. Food enters the stomach from the esophagus, through a ring of muscles known as the cardiac sphincter that normally prevents food from passing back to the esophagus. The other end of the stomach empties into the first section of the small intestine; the pyloric sphincter, which separates the two, remains closed until the food in the stomach has been modified and is in suitable condition to pass into the small intestine. The muscular action of the stomach and the digestive action of the gastric juice convert food in the stomach into a semi-liquid state (chyme). The stomach is believed to be independent of the central nervous system; The vagus nerve and sympathetic nervous system control the stomach's secretions and movements.

Symptoms may include: Gastritis, peptic ulcer, hiatal hernia, bloating, B-12 deficiency, low red blood cell production, or other digestive disorders.

Emotional aspect: Digestion symbolizes the ability to absorb what we need and to let go of what we do not need. Stomach energy can represent whether we are feeding ourselves and others, there can be a constant craving, a longing to fill hidden needs, or a strong denial and rejection of those needs. The stomach is where we harbor worry - the digestive enzymes churning with anxiety - until we can no longer stomach what is happening. It is common for food to be used to pacify uncomfortable emotions.

Teeth Resonance

Thymus Gland Resonance

Thyroid Gland Resonance

Urinary Tract Resonance

The urinary tract is the system (Ureters, bladder, Urethra) that discharges urine to rid the body of waste products. Products of carbohydrate and lipid metabolism are easily eliminated mainly in the form of carbon dioxide and water. Proteins, however, are more difficult to eliminate because the primary derivative of their metabolism, ammonia, is a relatively toxic compound.

Symptoms may include: Frequent urges to urinate, inflammation, discomfort, or cloudy urine.

Emotional aspect: Physical symptoms of the urinary system often have emotional correlations and how well we can release them. Holding onto unshed tears will cause stress and irritation in this system. Kidneys and Bladder are expressions of the water element in Traditional Chinese Medicine and so have an affinity to fear, anxiety, and our ability to go with the flow.

EVALUATION SUMMARY

Operator Aleksander Kanevsky DC, CFMP
Address 59 East 54th St, Rm. 62
New York, NY 10022
Phone 212-888-0520

Clinic Name Atlant Health
Email atlantchiro@gmail.com

Date: June 13, 2023
Sex: Male

DOB: 4/26/1937

Table with 2 columns: Baseline Summary and Signature Summary. Rows 1-24 list body systems with 'X' marks. Rows 25-48 list signature items with 'X' marks.

* THE INFORMATION ON THIS REPORT IS RELATED TO ENERGETICALLY BALANCING THE BODY AND IS NOT MEANT TO BE DIAGNOSTIC OR REPLACE THE ADVICE OF YOUR MEDICAL PHYSICIAN.
